

### LVN 30 Unit Option

In compliance with the regulations of the California Board of Registered Nursing, Dominican University of California offers an LVN 30 unit option plan for LVN's who are currently licensed in California and who wish to prepare only for licensure as a registered nurse in California. Upon successful completion of the required courses, the student is eligible to take the NCLEX-RN Examination for licensure. This program does not lead to a BS in Nursing and licensure may not be recognized in all states.

Admission is **based on space availability**. In order to enter clinical nursing courses, students must have a 3.25 cumulative GPA and have completed **BIO 3600/BIO 3605** Microbiology for Health Sciences/Lab (or its equivalent) and **BIO 2600/BIO 2605** Human Physiology/Lab (or its equivalent) with a grade of 'B' or better.

LVN's who are interested in the full BSN program must enter at the beginning of the nursing program and complete all BS requirements.

#### Courses required for the LVN 30 unit option:

| Course   | Units |
|--|-------|
